CALMSPACE – CASE STUDY FLOW

---

1. Problem

People often feel:

- overwhelmed
- anxious
- low on energy

Existing solutions:

- require too much effort
- don’t help in the moment
- overwhelm users with options

---

2. Goal

Design a simple experience that:

- helps users pause instantly
- guides them step-by-step
- reduces mental load

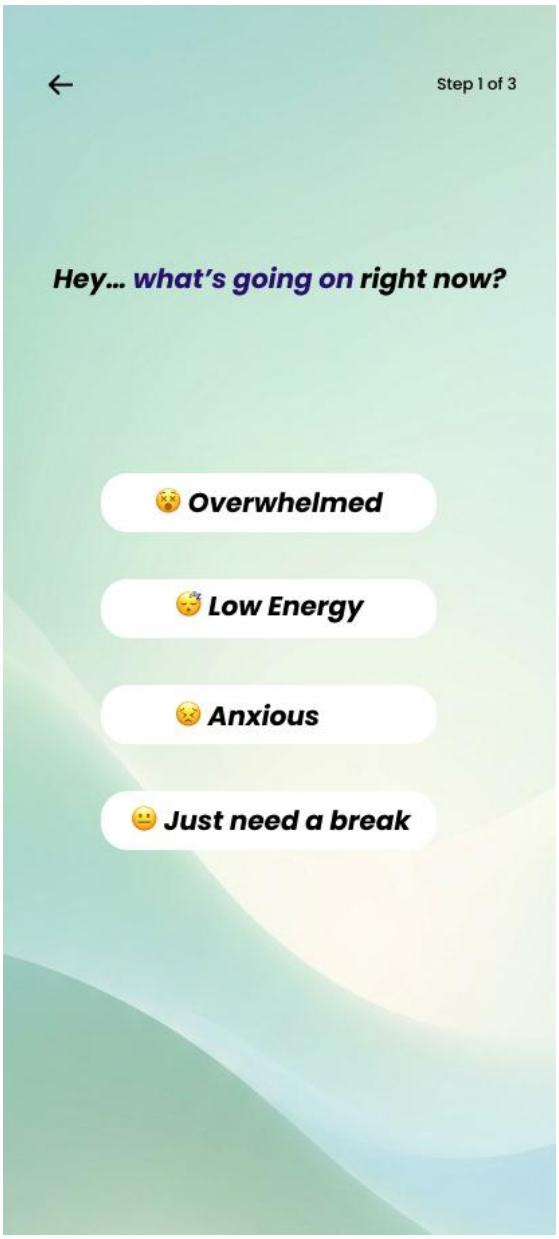
---

3. Solution

CalmSpace provides:

- quick mood selection
- personalized 3-step reset

- guided interaction instead of instructions



---

4. User Flow

Home → Mood Selection → Steps Overview → Guided Steps → Completion → Next Action

---

5. Mood Selection

Users select how they feel:

- Overwhelmed
- Low Energy
- Anxious
- Just need a break

This allows the app to provide a relevant response.

---

6. Steps Overview

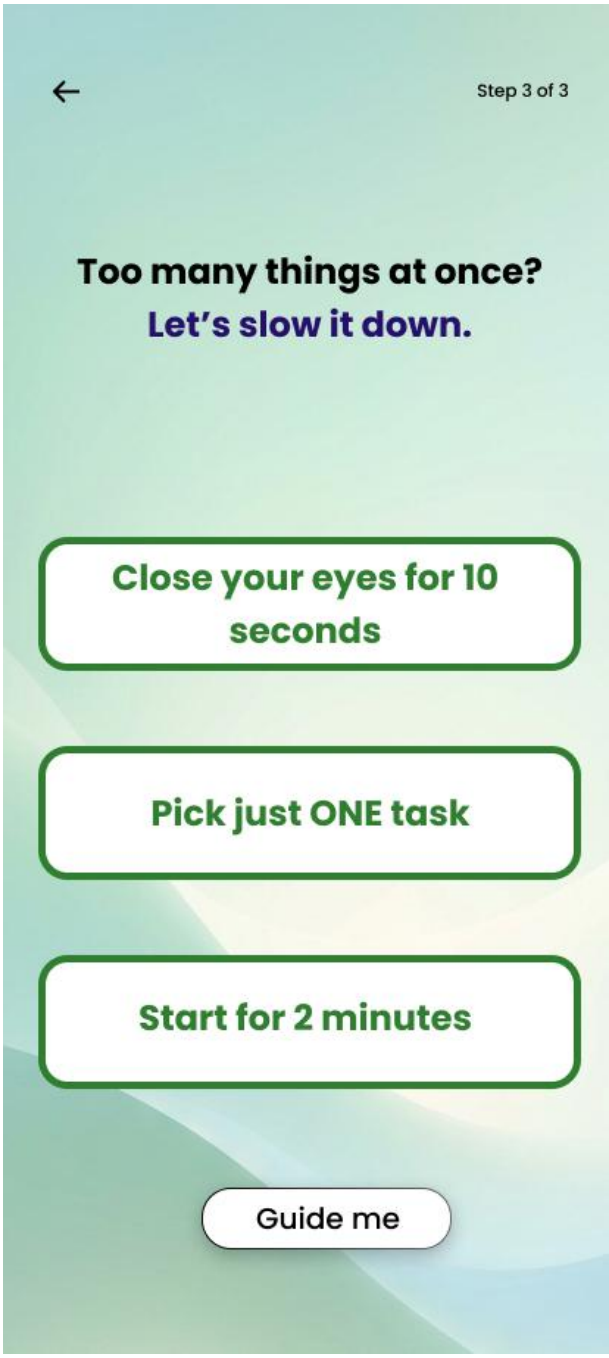
Instead of multiple options,
the app gives **one simple plan (3 steps)**.

Example:

- Sit up straight
- Take deep breaths
- Stretch

Users can choose:

- Guide me through this
- Do it myself



---

7. Guided Experience

Steps are broken into **one action at a time**:

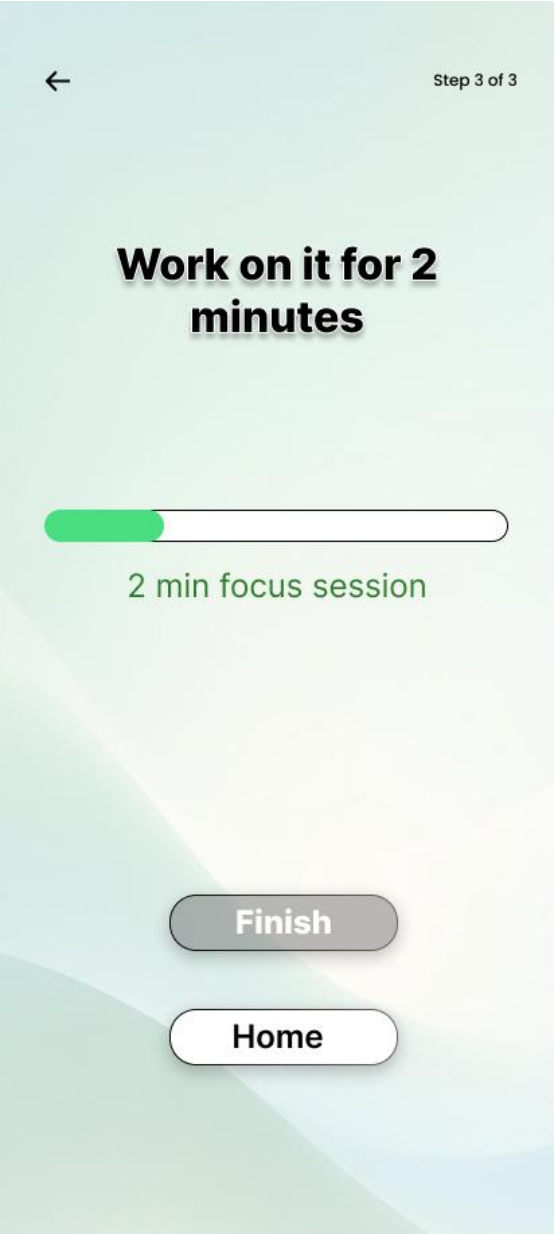
- Step 1 → simple instruction
- Step 2 → breathing interaction
- Step 3 → light action

This reduces cognitive load and increases engagement.

---

8. Interaction Design

- Circular indicator → used for breathing/pause
- Progress bar → used for focus session
- Minimal text → avoids overload



---

9. Completion

After finishing:

Users see a calm message acknowledging their effort.

Example:

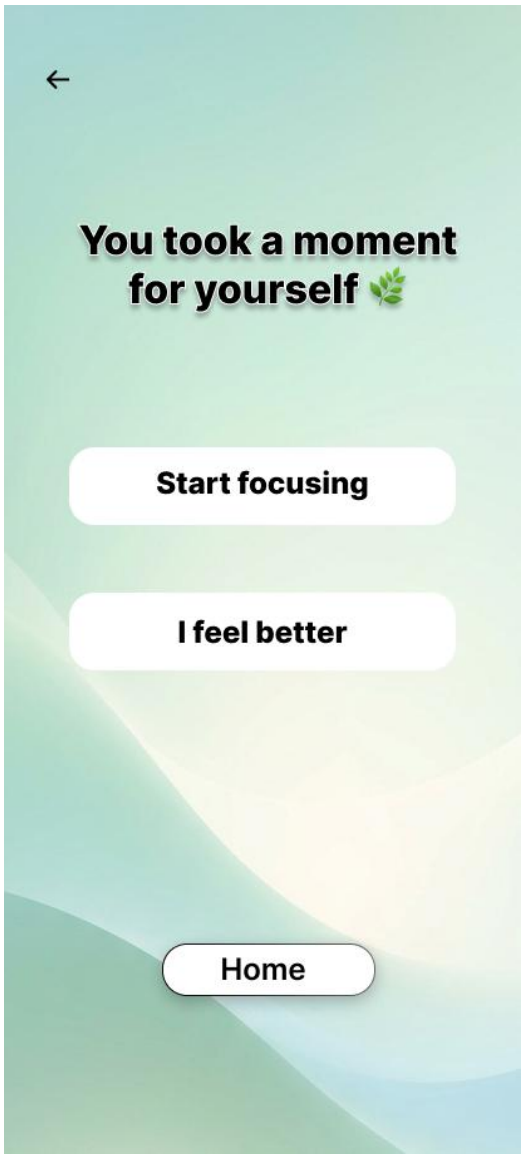
- You slowed things down
- You feel better now

10. Next Action

Users choose what to do next:

- Start focusing
- I feel better

This avoids looping back and supports forward movement.



---

11. Key Decisions

- Step-by-step guidance instead of static instructions

- No strict timers to avoid pressure
- Minimal UI to support calm experience
- Emotion-based flow instead of generic actions

---

12. Outcome

The app creates a simple, guided experience
that helps users reset and return to their tasks with clarity.
